

Unemployment Rate Reached 21,3% in Q1 2025

The Department of Statistics issued its quarterly report on employment and unemployment in Jordan for the 1st quarter of 2025, and the following demonstrates the main results:

- Unemployment rate (UNRATE) reached 21,3% in Q1 2025, indicating a decrease by 0,1 percentage point compared to 21,4% in Q1 2024.
- In the long term, UNRATE decreased by 1,5 percentage points over three years (compared to Q1 2022).
- Males' UNRATE reached 18,6% during Q1 2025, an increase by 1,2 percentage points compared to Q1 2024.
- Females UNRATE reached 31,2% during Q1 2025, a decrease by 3,5 percentage points compared to Q1 2024.
- Compared to Q4 2024, males' UNRATE increased by 0,4 percentage points and decreased among females by 1,0 percentage points.

Figure 1: Total Unemployment Rates by Gender and Quarters for the Years 2022 – 2025

Unemployed Individuals:

The results demonstrated that about 60% of the total unemployed individuals hold secondary education or higher, and about 40% hold less than secondary education.

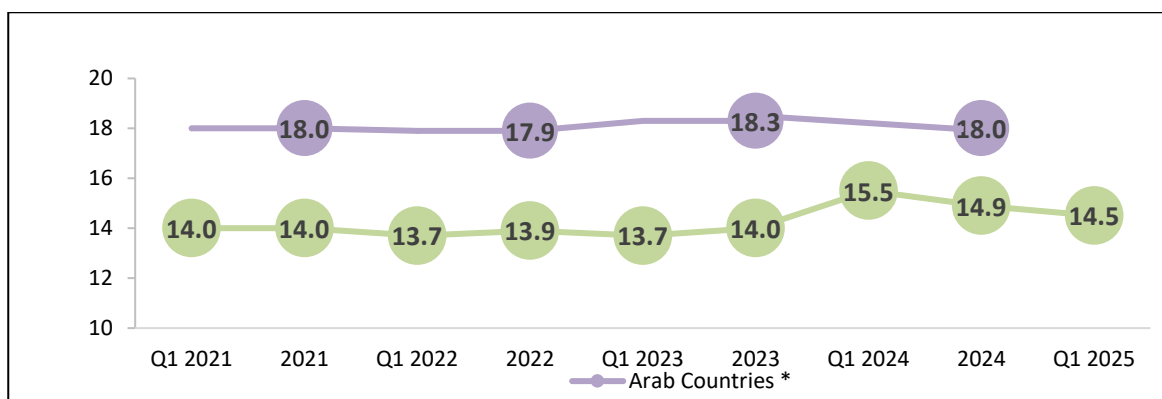

Employed Individuals:

- Of the total population ≥ 23 years, 31,0% are employed.
- Of the employed individuals population, 60% of males and 58,2% of females are in the age group (20-39) years.
- By educational level of the employed individuals population, 46,3% hold less than secondary education, 10,3% hold secondary education, and 43,0% hold higher than secondary education.
- 86,8% of employed individuals are paid workers (84.8% for males against 95.4% for females).
- The data of Q1 2025 showed a decrease in the expatriate workers to 44,0% of the total employed population, compared to 44.7% during Q1 2024, recording a decrease by 0.7 percentage points.

Labor Force (Employed and Unemployed):

- The revised economic participation rate (labour force attributed to the population ≥ 15 years) reached 32,9% in Q1 2025, compared to 34.1% in Q1 2024.
- Males' revised economic participation rate reached 51,2% in Q1 2025 compared to 53,7% in Q1 2024.
- Females' revised economic participation rate reached 14,5% in Q1 2025, compared to 15,5% in Q1 2024, indicating a decrease by 1,0 percentage points between the two periods, noting that females' economic participation rate in Arab countries is 18,0%.

**Source: Labour Force Survey

- The results showed an apparent disparity in labour force distribution by educational level and gender, as 55,2% of the total male labour force hold less than a secondary education level against 8,5% among females.
- The results indicated that 75,6% of the total female labour force hold a bachelor's degree or higher, compared to 27,1% among males.
- The percentage of female employees in the government sector of the total employees in this sector reached 22.3%.
- It is worth noting that the labour force survey (LFS) includes a sample of 16,560 households distributed over all Jordanian governorates, and representing urban and rural areas and the governorates. Also, LFS is conducted in the middle of each quarter, and provides data that reflects the whole quarter's facts (January, February, March). Respondents are asked whether they have searched for a job during the four weeks before the interview, in accordance with international recommendations adopted in Jordan.
